World Oil and Gas Review 2015

World Oil and Gas Review 2015

Eni presents the 14th edition of the World Oil and Gas Review, the annual statistics report on world reserves, production and consumption of oil and gas. A special focus is devoted to crude oil quality and the refinery industry. The inclusion of maps and graphs allow for a quick reading of the main historical trends.

The key findings:

- Oil and gas reserves recorded moderate growth with the USA showing the biggest jump due to tight oil play reservoirs and now enters in the top ten reserves holders.
- World oil production had the most significant increase in the last 10 years (+2.2%), concentrated in non OPEC countries. USA overtook Saudi Arabia and Russia as the first oil producer, with record growth (+15.4%) due to the tight oil boom. Iraq succeeded in achieving good results (+8.1%) and Iran returned to growth (+4.7%).
- Crude quality analysis shows a slight decrease of the light sour category, driven by heavier production in Middle East. At a country level, the increase of light sweet crudes in USA remains the most relevant change (57% of total vs 37% in 2010).
- Global oil demand growth halved to +0.7% in 2014. OECD countries continued their decline (-1%) with different paths on the two sides of the Atlantic: USA grew (+0.4%) whilst European countries lost ground with another year of contraction (-1.4%). Non-OECD countries led the growth (+2.5%) with China remaining the driving force albeit at a slower rate (+3.0% in 2014 vs the +6% average per year from 2009 to 2013).
- In the last four years world refining capacity has grown by 4 Mb/d: Asia, in particular China, is the main contributor adding more than 3 Mb/d. Middle Eastern refining capacity has increased as well and there is an expectation of a more sustained growth before the end of the decade. On the other side, falling domestic demand and increasing foreign competition pushed Europe to curb refining capacity.
- Gas production increase was led by US, which confirmed their leadership for the third year in a row thanks to the shale gas resources. In Russia, the world's second gas producer, output fell by 6.1%, reflecting declining domestic demand and contracting exports.
- World gas consumption recorded a modest decrease in 2014 (-0.4% vs the +2.4% average per year from 2000 to 2014). Mild weather and economic weakness drove gas demand reductions in Europe and Russia. On the other hand, Middle East and Asia Pacific gas consumption surged driven by economic growth, especially in Iran and China. The vast availability of domestic gas production and low prices supported US consumption growth, confirming its position as the biggest gas consumer in the world.

We hope that this edition will be a useful tool both for professionals and amateurs for a better understanding of the main trends of the Oil and Gas markets.

Claudio Descalzi
Chief Executive Officer and General Manager

List of Countries:

- **Europe:** Albania, Austria, Belarus, Belgium, Bosnia Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Gibraltar, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Macedonia, Malta, Moldova, Montenegro, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey, Ukraine and United Kingdom.
- **Russia and Central Asia:** Russia, Armenia, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan and Uzbekistan.
- **Middle East:** Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syria, United Arab Emirates and Yemen
- **Africa:** Algeria, Angola, Benin, Cameroon, Chad, Congo, Côte d'Ivoire, Dem. Rep. Congo, Egypt, Equatorial Guinea, Ethiopia, Gabon, Ghana, Kenya, Libya, Madagascar, Mauritania, Morocco, Mozambique, Namibia, Niger, Nigeria, Rwanda, Senegal, Somalia, South Africa, Sudan, Tanzania, Tunisia, Uganda, Zambia and Zimbabwe.
- **Asia - Pacific:** Afghanistan, Australia, Bangladesh, Brunei, China, East Timor, Hong Kong, India, Indonesia, Japan, Malaysia, Mongolia, Myanmar, Nepal, New Zealand, North Korea, Pakistan, Papua New Guinea, Philippines, Singapore, South Korea, Sri Lanka, Taiwan, Thailand and Vietnam.
- ■ **Americas:** North America, Latin America.
- **North America:** Canada and the United States.
- **Latin America:** Argentina, Barbados, Belize, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Jamaica, Mexico, Netherlands Antilles, Nicaragua, Panama, Paraguay, Peru, Suriname, Trinidad and Tobago, Uruguay and Venezuela.
- **European Union:** Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden and United Kingdom.
- **OECD:** Europe, Middle East, Asia - Pacific, North America, Latin America.
 - **Europe:** Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.
 - **Middle East:** Israel.
 - **Asia - Pacific:** Australia, Japan, New Zealand and South Korea.
 - **North America:** Canada, Mexico and the United States.
 - **Latin America:** Chile.

- **OPEC:** Algeria, Angola, Ecuador, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates and Venezuela.
- **MENA (Middle East and North Africa):** Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syria, United Arab Emirates and Yemen, Algeria, Egypt, Libya, Morocco and Tunisia.
- **MED:** Albania, Algeria, Austria, Bosnia Herzegovina, Bulgaria, Croatia, Cyprus, Egypt, France*, Germany*, Gibraltar, Greece, Hungary, Israel, Italy, Jordan, Lebanon, Libya, Macedonia, Malta, Montenegro, Morocco, Romania, Serbia, Slovenia, Spain*, Switzerland*, Syria, Tunisia, Turkey and Ukraine.
- **NWE (North West Europe):** Belgium, Czech Republic, Denmark, Estonia, Finland, France*, Germany*, Iceland, Ireland, Latvia, Lithuania, Luxembourg, Netherlands, Norway, Poland, Portugal, Slovakia, Spain*, Sweden, Switzerland*, United Kingdom.

This Review adopts the most commonly used names for countries and not necessarily the official name.

The names used do not in any way indicate the opinion of Eni on the legal status of countries, territories, cities or areas mentioned. The term "country" is used to indicate, when necessary, also a territory or area. Borders between countries are indicated on the maps and do not imply judgement of any kind or the position of Eni with regard to current international disputes.

This Review has been prepared by the Scenarios, Strategic Options & Investor Relations Department.

(*) Pro quota

Notes and Methods

The sources of the data are: Arab Oil & Gas Directory, Cedigaz, CME, DECC, EIA DOE, Enerdata, ICE, ICIS Consulting, International Energy Agency, IHS Global Insight, Italian Ministry for Economic Development, Norwegian Petroleum Directorate, Oil & Gas Journal, OPEC, PIRA, PIW, Wood MacKenzie and other official sources.

Blank spaces in the tables indicate that the figure was not available, zero indicates a figure that is not significant (except for the chapters **"Production Quality"**, **"Imports"** of natural gas and **"LNG Liquefaction and Regasification Capacity"**).

Total may differ from the sum of the individual figures as a result of rounding up/down.

Percentages have been calculated before rounding.

Data for Sudan also include South Sudan.

World total population is the population of all the countries in the world, while population figures for areas and aggregates take into account only the countries for which this publication shows energy data. Therefore the sum of population figures of all areas and aggregates is lower than world population.

Oil

Gas

In all the chapters of oil and natural gas, in some countries figures may include oil and natural gas from non conventional sources and others sources of supply.

The figures for **"Reserves"** refer to proven reserves as at 31st December. The figures for other chapters indicate annual averages.

In all the chapters, the list of the "The world top 10..." is drawn up by ordering the countries on the basis of the last available year. In the chapters **"Reserves/Production Ratio"** and **"Production/Consumption Ratio"**, the list of the "The world top 10..." is drawn up by selecting the largest producers in the last available year and ordering them on the basis of the value of the reserves/production and production/consumption ratio. In the chapter **"Per Capita Consumption"**, the list of the world top is drawn up by selecting the largest consumers in the last available year and ordering them by the value of per capita consumption.

Oil

The difference between the Consumption and the Production of oil is given by the change in stocks, the processing gains obtained in refining and the amount of biofuels which is not included in Production.

Gas

In the chapters **"Production"**, **"Consumption"**, **"Exports"** and **"Imports"** figures are assessed by using the same calorific value per cubic metre (39 MJ/cm, GCV), in order to make data among countries comparable. For NON OECD countries, data for 2014 are Eni's estimates.

In the chapter **"Production"** of natural gas, the figures concern traded production and do not include quantities of flared, dispersed or re-injected gas.

In the chapter **"Imports"**, imports of liquefied natural gas cover only the dry marketable equivalent after regasification.

In the chapter **"Imports"**, the figure reported as total imports for a single country may differ from the sum of "Imports by LNG and pipeline" for the same country, because of the different sources and different calorific attached to the cubic metre.

Production Quality

In the chapter **"Production Quality"** figures for total oil production in each area or country do not coincide with the figures in the **"Production"** chapter of the Review. This is due to the exclusion of natural gas liquids and extra heavy crude from the figures for the first (except for Venezuela). Moreover, it has not been possible to allocate or define total production. In some countries the 'Ultra Light' category also includes, in total or in part, the production of condensates. For Canada the production includes syncrude.

API degree is used universally to express a crude's relative density. The arbitrary formula used to obtain it is: $API\ gravity = (141.5/SG\ at\ 60^{\circ}F) - 131.5$, where SG is the specific gravity of the fluid. Lighter the crude, higher the API gravity. The API scale was designed so that most values would fall between 10 and 70 API gravity degrees. Fresh water has an API density of 10.

Atmospheric distillates yields are obtained according to TBP (True Boiling Point) technique, ASTM D2892 procedure. Figures are expressed in mass percentage.

For the definition of the qualitative parameters for single crudes, the data of "Eni-R&M Division - San Donato Research Center - Downstream Products Technologies" have been used, wherever possible. Quality levels, indicating API gravity and sulphur content, are defined as follows.

Quality levels - API gravity and sulphur content

Ultra Light	API level equal to or greater than 50° and a low sulphur content
Light & Sweet	API level equal to or greater than 35° and less than 50°, sulphur content less 0.5%
Light & Medium Sour	API level equal to or greater than 35° and less than 50°, sulphur content equal to or greater than 0.5% and less than 1%
Light & Sour	API level equal to or greater than 35° and less than 50°, sulphur content equal to or greater than 1%
Medium & Sweet	API level equal to or greater than 26° and less than 35°, sulphur content less 0.5%
Medium & Medium Sour	API level equal to or greater than 26° and less than 35°, sulphur content to or greater than 0.5% and less than 1%
Medium & Sour	API level equal to or greater than 26° and less than 35°, sulphur content equal to or greater than 1%
Heavy & Sweet	API level equal to or greater than 10° and less than 26°, sulphur content less 0.5%
Heavy & Medium Sour	API level equal to or greater than 10° and less than 26°, sulphur content equal to or greater than 0.5% and less than 1%
Heavy & Sour	API level equal to or greater than 10° and less than 26°, sulphur content equal to or greater than 1%

Refining Industry

The "Refining Capacity" set of tabulations provides the following information:

- Refineries: includes asphalt and lube oriented units, when dedicated topping capacity is present. Condensate refineries are included.
- Primary Capacity: represents a pro rated annual average of available capacity, excluding turnarounds.
- Conversion Capacity (FCC eqv.): sum of conversion capacity, converted to "Catcracking (FCC) equivalent" capacity. "FCC equivalent" capacity equals 1; other conversion capacities can be higher or lower than 1 (the equivalent factors are reported below in the next table).
- Complexity Capacity - FCC eqv.: ratio of Conversion Capacity (converted to FCC equivalent) over Primary Capacity, calculated on a weight basis.
- The higher is the complexity index, the higher is the capability of a refinery to produce high equivalent quality and value products.
- Complexity Ratio - NCI (Nelson Complexity Index): is another measure of secondary conversion capacity in comparison to the primary distillation capacity. The units are rated in terms of their costs relative to the primary distillation unit. The higher is the index the higher is the capability of a refinery to produce high quality and value products.

The equivalent factors for the FCC equivalent calculation, reported below, change according to the type and the configuration of the conversion unit and are from ICIS Consulting. The factors for the Nelson calculation are standard factors, modified as necessary by Eni. Oxygenates and Aromatics are excluded.

European imported crudes with the most significant quality change

CPC blend quality trend - period 2012-2014 - °API, Yields %wt

Basrah quality trend - period 2010-2014 - °API, Yields %wt

Kirkuk quality trend - period 2010-2014 - °API, Yields %wt

Azeri from BTC quality trend - period 2010-2014 - °API, Yields %wt
