### quality system engineer

Management of the Quality System. Advice to operational lines on the maintenance and development of required quality standards for processes and projects. Management of the Quality System including analysis of organisational processes, recommendations for improvements to processes, definition of quality standards (KPI), performance of internal audits for verification purposes and liaison with external certification bodies.

### project engineer (project management + planning and E&C cost controller)

Project work with the objective of planning activities for the job or service in question. Use of project planning techniques (GANTT, PERT, etc.) to evaluate and define, based on the resources available, the overall and detailed plan for the work: milestones, distribution of economic resources and allocation of human resources. Communicating plan to Management and to the resources involved, compiling the relevant reports. Monitoring of trends in project times and costs, proposing solutions for any recovery action.

### construction engineer on/offshore

Through participation in Project Team activities, management of the overall construction process for onshore and offshore rigs and platforms, structures and pipelines; coordination of contractors and necessary equipment; ensuring all rigs and platforms are standardized.

### logistics engineer

Managing, developing and diffusioning logistics know-how; identifying site logistic requirements and defining any necessary improvement or construction work; configuring and executing the relevant projects; planning and executing specialist logistic services for the operating units and for exploration, development and production projects.

### planning and management control

Preparing and consolidating company budgets/plans. Management control activities through the measurement of specific performance indicators for periodic assessment (forecast and actual) of discrepancies between predefined objectives and results attained; providing data to the bodies responsible for defining corrective actions.

### buyer/contract engineer

Purchasing of products and services based on technical specifications provided by the lines of business, using qualified suppliers. Management of purchasing budget and tenders, including online tenders, in compliance with national and international regulations and company procedures on the subject.

### human resources assistant

Advising operating lines on all areas linked to the definition of processes and procedures, structures and roles. Supporting the definition of company IT processes. Cooperating with other HR functions to ensure the right mix of human resources in terms of quality and quantity to achieve company targets.

## risk assessment engineer

Operating in various fields: finance, internal audit, HSE and within engineering and construction projects. Using risk assessment techniques to predict high risk areas for processes or projects, in order to activate prevention systems to address financial risks, decision risks and those linked to the safety of people, plant and the environment.

## internal auditor

Internal control within company work processes. Analysis of internal regulations with assessment of any risks inherent in the processes and activities, advising people involved to keep risks under control, analysis of internal practices and operating flows, highlighting any differences in comparison to requirements and proposing solutions.

## estimating engineer

Operating in the sales field. Defining bids made by the company to customers. Compilation, based on knowledge of work processes, of estimates at the feasibility stage and during the execution stage, each time a change or variation in the work is required.

## market analyst

Monitoring of market dynamics for the commodities covered and supporting traders by means of a timely and detailed analysis of possible price developments. Knowledge of target markets and analysis of data and important events to provide effective tools to support the decisions of traders and management.

## trader

Buying and selling of commodities and financial products (oil, products, derivatives, gas, power, CO<sub>2</sub>, LNG) on markets covered by the company to maximize portfolio value while respecting the code of ethics and procedures. Developing and maintaining relationships with counterparts in target regions/markets and with other traders operating in different offices, taking into consideration the international nature of the company.

## customer support

Analysis and evaluation of bids for the supply of gas. Supporting sales units, by provision of price simulations for the energy market and the implementation of new products. Supporting the drawing up and management of gas supply contracts. Working with the administrative units on checking credit lines and management of debt collection. Preparing business reports and presentations.
