

The history of supercomputing

Events around the world

Events at Eni

1948

Manchester Baby, the first computer in history with RAM memory

1980

Agip Computing Centre for Geophysical Data Processing is established

1950

Transition from analogue to digital computing machines

1985

Cray-2, first system with 3D-stacked boards

1996

1996 - Cray Y-MP 4 E reaches a computing power of 0.6 GFlops

2002

Earth Simulator simulates the atmosphere and oceans with 10 km accuracy

2005-2022

Blue Brain Project, simulation of the human brain

2012

WLCG, discovery of the Higgs boson

2014

HPC2 Eni - Peak computing power: 4.6 PFlops

2017

HPC3 Eni - Peak computing power: 3.8 PFlops (7.5 X HPCC1)

2020

HPC5 Eni - Peak computing power: 52 PFlops

2022

ChatGPT becomes available to the general public

2013

HPCC1 Eni - Peak computing power: 0.5 PFlops

2016

AlphaGo beats Go champion Lee Sedol

2018

HPC4 Eni - Peak computing power: 18.6 PFlops

2021

Google DeepMind releases the AlphaFold Protein Structure Database

2024

HPC6 Eni - Peak computing power: > 606 PFlops
