Versalis to produce new solid polystyrene products with up to 75% recycled raw material

San Donato Milanese (MI), 03 August 2020 - Versalis (Eni) and Forever Plast SpA, a leading Italian company in the recovery and recycling of post-consumer plastic at European level, have signed an agreement to develop and market a new range of solid polystyrene products made from recycled packaging.

The new Versalis Revive® PS - Series Forever products, polystyrene-based compounds* containing up to 75% of recycled solid polystyrene, are able to meet the requirements of multiple applications such as thermal insulation, non-food packaging and household items.

The recycled polystyrene comes from separate household waste collection, including yoghurt pots and disposable dishes that will be supplied by the COREPLA network, the National Consortium for the Collection, Recycling and Recovery of Plastic Packaging.

With the Versalis Revive® PS - Series Forever range, Eni's chemical company expands its portfolio of products from mechanical recycling in addition to those based on expandable polystyrene (Versalis Revive® EPS) and polyethylene (Versalis Revive®PE) already on the market.

**compound: a blend of polymers and/or polymers and additives to create the required properties of produced plastics.*
